

Trust for Credit Unions Government Securities Portfolio

Portfolio Summary

A Fund Designed for Credit Unions

INVESTMENT OBJECTIVE

The Portfolio seeks to achieve a high level of current income consistent with low volatility of principal. It invests primarily in securities issued or guaranteed by the U.S. government or its agencies or instrumentalities that are authorized under the Federal Credit Union Act.

PERMISSIBLE INVESTMENTS

The Portfolio has been awarded Standard & Poor's Ratings Group's highest rating – AAA. This rating is based on the credit-worthiness of the Portfolio's assets, its investment policies, and portfolio management. Investments include:

- Securities issued or guaranteed as to principal and interest by the U.S. government or by its agencies, instrumentalities or sponsored enterprises;
- Repurchase agreements pertaining thereto; and
- Short-term obligations that are typical investments for a money market fund.

INVESTOR PROFILE

The Trust for Credit Unions Government Securities Portfolio is intended for credit union investors who seek a high level of current income consistent with low volatility of principal through investment primarily in short-duration government securities.

INVESTMENT PROCESS

The Portfolio seeks to provide a high level of current income while attempting to maintain low price volatility. The value of adjustable rate mortgage securities is generally subject to smaller price fluctuations than fixed rate mortgage securities because the interest rates paid by these securities periodically adjust up or down to reflect changes in prevailing interest rates. The Portfolio emphasizes Treasury-based and other market-indexed ARMs in seeking to increase net asset value (NAV) stability. It may use a

small component of derivative mortgage securities in seeking to both enhance return and provide additional NAV stability.

PORTFOLIO FACTS

Duration

Under normal conditions, the Portfolio's duration is approximately equal to a six-month to one-year U.S. Treasury security. Its maximum duration cannot exceed that of a two-year U.S. Treasury security.

Fluctuating Net Asset Value With Daily Liquidity

The Portfolio's net asset value per unit fluctuates as the value of its securities changes in response to changing interest rates, principal prepayments, and other factors. Portfolio units may be redeemed upon request on any business day at the net asset value. This enables the Portfolio to offer greater liquidity than short-term investments with redemption restrictions and direct investments in certain mortgage-backed securities.

Investment Flexibility

There is no minimum investment requirement for the Portfolio.

Income

Income is accrued daily and paid monthly in additional units unless cash distributions are elected. Over the course of the year, dividends accrued and paid will constitute substantially all of the Portfolio's net investment income. The Portfolio also intends that all net realized long-term and short-term capital gains will be declared and paid as a dividend at least annually.

Purchases and Redemptions

Purchases may be made at the net asset value next determined after an order is received. Payment must be made by Federal Funds Wire on the next business day. Units begin earning income on the next business day, provided the federal funds are received. Redemptions may be made at the net asset value next determined after a redemption request is received.

The Trust for Credit Unions Portfolios are not deposits or obligations of, or guaranteed or insured by any agency of the United States such as the National Credit Union Share Insurance Fund (NCUSIF), or a private share insurance or guaranty arrangement, and are not guaranteed or otherwise supported by Callahan Financial Services, Inc. and Goldman, Sachs & Co. Callahan Financial Services, Inc. and Goldman, Sachs & Co. are each separate, distinct and unaffiliated companies.

Goldman, Sachs & Co. and Callahan Financial Services are co-distributors of the Portfolios.

The Fund's net asset value and yield are not guaranteed by the U.S. government or by its agencies, instrumentalities, or sponsored enterprises.

The investment return and principal value of an investment in a fixed income fund will fluctuate with changes in market conditions. Therefore, an investor's shares may be redeemed at more or less than the original cost.

This material is not authorized for distribution to prospective investors unless preceded or accompanied by a current prospectus. Additional information may be obtained by writing to the address on the back or by calling 1-800-621-2550. Investors should read the prospectus carefully before investing or sending money.

INDUSTRY KNOWLEDGE

Callahan Financial Services

Callahan Financial Services, formed in 1987, is a licensed broker/dealer and wholly owned subsidiary of Callahan & Associates. Callahan & Associates was formed in 1985 by the former chairman, general counsel, and regulatory director of the National Credit Union Administration. Callahan & Associates has become a significant presence in the credit union community through its consultative services, which include research, strategic planning, management services, and publishing – all exclusively for credit unions.

INVESTMENT EXPERTISE

Goldman Sachs Asset Management

A separate operating division of Goldman, Sachs & Co., a leader in wealth management for over 129 years, Goldman Sachs Asset Management leverages its firm's vast global resources, research, and risk-management expertise. Goldman Sachs Asset Management has built a broad and experienced team of portfolio managers with mortgage securities experience:

- The Portfolio managers at Goldman Sachs Asset Management oversee more than \$13.0 billion in mortgage securities (as of June 1999).
- The team is experienced in the analysis, valuation, and trading of these markets, and is able to draw upon the economic and fixed income resources of Goldman, Sachs & Co., which includes the firm's proprietary models. In particular, option-adjusted analytics are used to estimate mortgage prepayments and cash flows under different interest rate scenarios.
